

GRASS ROOTS

GR Project White Paper

<https://grbsc.top/>

GR is an innovative digital currency issued on BSC (Binance Smart Chain), dedicated to building a decentralized financial ecosystem based on grassroots power. Here, you can learn about the latest developments, technical features, market conditions, and participation methods of GR.

summary

Grassroots Jointly established by a number of senior blockchain funds. In order to improve the professional blockchain asset management, the GrassRoots asset management platform was launched. Business covers a block chain advanced data analysis, quantitative trading, assets pledge lending, deposit interest, DeFi financial, block chain funds, project generation, private equity funds, futures, bank acceptance bill, bank culture, non-standard financial, gold leasing business, policy discount funds, overseas quantitative funds, financial insurance block chain asset management and derivatives services. Using blockchain technology and smart contracts to solve the problems of autonomous community construction and application implementation, Help community creators better create a community through a range of product function applications; Better manage the GrassRoots community through advanced community management systems, Improve community stickiness, Improve community activity; Through the underlying blockchain technology and smart contracts, Protect the rights and interests of GrassRoots community users, Increase the

GrassRoots community trust, To achieve the application of the landing; From the perspective of the transparency and intelligence of the community blockchain, A statistical analysis of peoples behavior, Conduct the promotion, Thus effective commercial promotion activities; Through the Toks incentive model, aggregate and cultivate more GrassRoots community creators and outstanding community nodes to build an ecological community, And finally through the flow of realization and ecological consumptionBusiness returns. In the future, GrassRoots will develop its own main chain, based on the WEB 3 main chain and the open platform, combined with the global development partners, to build a sustainable development of the district industrial chain application pioneer. It provides Windows and guarantee for more users to enter the blockchain world, provides perfect community operation tools and comprehensive community development support for community creators, and provides underlying technical support and community services for the rich landing application scenarios of blockchain

Chapter I: Project Background

1.1 The rapid development of blockchain technology

The year 2020 is the year of DeFi. Many projects have explored ways to encourage users to participate in funds, that is, issuing platforms to manage tokens, and generate certain benefits for users who provide liquidity, which also gives rise to the boom of "liquidity mining".

2021 is the first year of Defi prosperity, with hundreds of billions of dollars entering the Defi field; it incorporates traditional financial elements and expresses brand new financial elements.

DeFi is just like a "crescent land" just beginning to

cultivate, and all kinds of innovations are constantly emerging. Defi is merging the universe + NFT and the ecosystem of the future; but also changing the perception of enlightenment participants, we look forward to its expansion and conquest of traditional finance.

The 1.2-yuan universe has become the focus of the capital competition

In March 2021, the concept stocks entered the New York Stock Exchange in the way of DPO, and the market value exceeded \$40 billion on the first day of listing, setting off a boom of the universe, which quickly became a hot topic on the Internet. At present, the virtual world of the meta-universe has also become the focus of the capital competition. International giants including Facebook are laying out the universe track. According to data, the market size of the universe will reach \$470 billion in 2025 and \$1.5 trillion in 2030.

Under the tutelage of the metaverse, the major technology giants have joined in, making the derivative model of the metaverse more up. Under the support of the metaverse is

undoubtedly the next tutelage under the strong community consensus!

Metaverse, from the 1992 science fiction novel *Avalanche*, describes a cyber world similar to the real world. In today's sense, the Metaverse universe refers to the next generation of Internet forms derived from the integration of VR / AR technology, the Internet, games and social networks.

The freedom, equality, openness and eternity of the universe is a natural match with the decentralization, traceability and "code is law" characteristics of smart contract agreements for blockchain technology. Therefore, the on-chain protocol is also regarded as the best technical

solution for realizing the metacom conception.

Nowadays, "the meta-universe connected by the virtual world" has been considered by the investment community to be a grand and promising investment theme. The meta-universe is optimistic by the major capital, combined with DEFI, DAPP, NFT, etc., will also become the value fulcrum of the meta-universe!

Chapter 2: Project Introduction

2.1 What is a digital asset

Digitalassets (Digitalassets) refers to the non-monetary assets owned or controlled by an enterprise, existing in the form of electronic data, held in daily activities for sale or in the production process.

Broad digital assets refer to the assets owned or controlled by individuals or enterprises in the form of electronic data, holding the corresponding physical assets used for exchange or exercise in daily activities. In the narrow sense, digital assets specifically refer to a computer program (tokens) registered on the blockchain distributed ledger, which can be programmed. The exchange between assets is the

exchange of code and code.

2.2 What is blockchain

Blockchain is a new application mode of computer technologies such as distributed data storage, point-to-point transmission, consensus mechanism and encryption algorithm. The so-called consensus mechanism is a mathematical algorithm in the blockchain system to establish trust and gain rights between different nodes. It is essentially a decentralized database that simultaneously acts as the underlying technology for tokens. A blockchain is a string of data blocks generated by using cryptographic methods. Each data block contains information about a Bitcoin network transaction, which is used to verify the effectiveness of its information (anti-counterfeiting) and generate the next block.

In a narrow sense, blockchain is a distributed ledger with a chain data structure that combines data blocks in chronological order and ensures cryptographically.

Broadly speaking, block chain technology is the use of block chain data structure to verify and data storage, using distributed node consensus algorithm to generate and update

data, using the way of cryptography to ensure the security of data transmission and access, the use of smart contracts composed of automated script code to programming and operation data of a new distributed infrastructure and computing methods.

2.3 Integration of blockchain and digital assets

After the digitization of resources, many problems have appeared, such as piracy and infringement, privacy leakage, illegal data reselling and other problems. The key reason behind these problems lies in that the mechanisms of data resources transaction circulation, ownership certificate, rights and interests protection are not perfect, which makes it difficult for "digital resources" to form "digital assets"

and the value of data to fully show.

The emergence of blockchain technology has solved these problems. More and more industries are proposing their own blockchain solutions. It can be applied quickly. Blockchain can help digital assets further develop and upgrade. details are as follows:

From centralization to decentralization, build an ecosystem of digital assets. Blockchain promotes product and cultural exchanges in all walks of life, and no longer relies on third-party organizations or centralized management.

From distrust to trust, blockchain helps digital assets solve problems such as fraud and repeated payments. The system operation is open and transparent, and the "signature" mechanism and the principle of "minority obeying the majority" can guarantee credit from the mechanism. Users can always check the source of the traced tokens, no longer worrying about risks such as fraud.

From secure to secure, a message is sent to all nodes after each transaction occurs. When the transaction is made again, the block will check whether the data is tampered with through the data of other nodes, but it is found that the data will be recovered from other nodes will be recovered, effectively

eliminating the data tampering by hackers.

2.4 What is a GrassRoots

GrassRoots Based on the blockchain technology can establish point-to-point communication security and trust in the network, so that the value transmission process can remove intermediary interference, both information and protect privacy disclosure, joint decision-making and protect individual rights and interests. Therefore, GrassRoots using blockchain technology can support the realization of high-trust application of digital currency business by subverting the traditional technology model of currency information system.

GrassRoots Is an open and inclusive autonomous community platform integrating DAO, DEFI, mining, NFT and the universe, creating a unique cluster ecological economic model of GrassRoots community, and becoming a DEFI star ecology! Let GrassRoots holders get higher value returns, so that global users have their own application industry, through the joint construction of global participants, joint governance, and constantly improve technological innovation and explore new areas.

GrassRoots At the application experience of community construction and management tools, the design idea of GrassRoots is to use the underlying blockchain decentralized ledger to record community ownership information, GrassRoots node incentive algorithm information and task information, and to solve the problem of community contribution incentive and task reward with smart contract, so as to ensure the openness and transparency of community ecological economy. While the application layer adopts the efficient central development architecture, which fully ensures the high performance of various read and write operations, effectively avoids the problems such as the current blockchain transaction contract confirmation time, high cost, easy congestion and so on, and ensures the smooth interactive experience of community products to the greatest extent. Community construction and operation tools have been in the development and future development functions: community function, community, live, learning, offline entity mall consumption, charity, finance, pension, auction mall, fun big wheel, chain, NFT blind box, yuan universe, DEFI pledge mining, game world, mall, member center, etc.

2.5 Mission and mission of GrassRoots

GrassRoots Based on the global vision, it comprehensively subverts the development model of the Internet, takes community construction as the core, promotes the development of finance with blockchain technology, and builds a better, healthy, mature, convenient and extensive decentralized trading market.

GrassRoots mission is as follows:

- 1) Create a fair, co-create and co-profit entrepreneurial model;
- 2) Provide a real inclusive financial ecology;
- 3) Create a decentralized community world that anyone can explore;

GrassRoots Redefines the identity of community members, and uses the model technology of blockchain and DAO to achieve more value for individuals and enterprises and communities. GrassRoots has the same economic and social model as the real world, bringing people a new form of experience of the development of the Internet.

Ecological characteristics of 2.6GrassRoots

1). Diversity of gameplay

GrassRoots Provide open and free creation, continuous content generation, and diverse gameplay. As a virtual space for players to live for a long time, GrassRoots will continue to open all types of application scenarios, open third-party interfaces to reduce the threshold of creation, and form a self-evolution mechanism.

2). Social universality

GrassRoots It can break through the limitations of physical time and space, not only form the replacement of offline relations, based on the identification of the virtual environment and existence, but also will have a major change to the mainstream social mode.

3). Immersive experience

GrassRoots The metaverse should have an alternative to the real world. Under the general trend of combining virtual and real, information terminals develop along the two routes of high-frequency interaction and fidelity. The breakthrough in fidelity of XR devices based on VR and AR will bring qualitative improvement to the immersive experience.

4) Individualized economic system

GrassRoots With independent economic attributes, anyone can create, trade, and "work" and get rewards, forming a similar to real life or even economic and cultural prosperity.

Technical features of the 2.7GrassRoots

1) Freedom of payment—Any amount of money can be paid and received immediately at any time and anywhere. No borders, no imposed restrictions. GrassRoots Allow its users full control of their funding.

2) Very low fee—There is no commission or a very small fee for the treatment of GrassRoots payments. Users can include the handling fees in the transaction to get the processing priority, and receive the transaction confirmation from the network faster. In addition, there are also merchant processors to help merchants process transactions. Because these services are based on GrassRoots, they can offer fees far less than PayPal or a credit card network.

3) Reduce merchant risk—GrassRoots transactions are safe, irrevocable, and do not contain sensitive or personal information about customers. This avoids the damage caused to merchants due to fraud or fraudulent refunds, and it is not necessary to comply with the PCI standards. Merchants can also easily expand into new markets where credit cards are unavailable or have unacceptably high fraud rates. The end result is lower costs, greater markets, and less administrative costs.

4) Security and control—GrassRoots users have full control of their transactions; merchants cannot be forced to charge fees that may be absent or discovered in other payment methods. Payment with GrassRoots can bind personal information in transactions, which provides a great protection against identity theft. Users of GrassRoots can also protect their money through backup and encryption.

5) Transparency and Neutrality—All information about the GrassRoots funding supply itself is stored in the blockchain and can be tested and used by anyone in real time. No individual or organization can control or manipulate the WEB 3 protocol because it is password protected. This makes the GrassRoots core believed to be completely neutral, transparent, and

predictable.

6) Smart contracts–GrassRoots Using smart contracts means that blockchain transactions are much more than the basic functions of currency transactions, and there will also be a wider range of instructions embedded into the blockchain. In the past, two parties do or do not do something in exchange for something, and each party must trust each other to fulfill their obligations. Smart contracts do not need to trust each other, because they are not only defined by code, but also enforced by code, and are completely automatic and inaccessible. A smart contract program is not just a computer program that can be automatically executed, it is itself a system player that responds to the information received, can receive and store value, and can also send information and value outward. This program is like someone who can be trusted, temporarily keeping assets and always following prior rules. Smart contract solves the trust problem in the traditional contract, greatly reduces the cost of trust, and effectively protects the interests of both sides of the contract.

2.8 GrassRoots Design principles

GrassRoots Follow three design principles: expansion principle, expansion principle, safety principle.

1. Extension principle: GrassRoots Each module application is freely coupled, and it is easy to add new modules. Each module itself does not need the change of other module interface.

2. Scaling principle: The access of GrassRoots application is fluctuating. If a large number of users access a node, it will inevitably bring the consequences of node service crash,

so the node container itself can be automatically deployed, and realize the horizontal expansion when the user request pressure.

3, security principles: GrassRoots supports multi-channel characteristics, the data between different channels are isolated from each other, improve the isolation security, support the removable architecture, including consensus, authority management, encryption and decryption, ledger mechanism multi-module and other types.

Chapter III: The Concept of Community Construction

How to make the whole community more sticky, how to increase more community users, how to cultivate more community creators and community nodes, how to protect the interests of the community users, how to solve the problem of community trust, how to make the future more block chain landing application get effective implementation these are GrassRoots community to strive to solve the problem. It is also a problem that the whole blockchain ecosystem and various blockchain institutions will face in the development process of blockchain in the future. GrassRoots The community has put forward the construction concept of community construction. From the perspective of transparency and intelligence of community blockchain, peoples

behaviors are statistically analyzed and promoted, so as to effectively promote commercial activities. And through unremitting efforts, knot and DAPP application layer product functions and blockchain underlying technology, is committed to building a blockchain-based global community users to build autonomous ecological community platform.

3.1 Cultivate aggregated community co-builders

The increase of community users, the popularization of blockchain knowledge, the activity of users, and community management are all inseparable from the community co-builders. GrassRoots Community is the main chain of global community people themselves, which is committed to solving the problems in the development of blockchain ecological community. We will formulate a fair and reasonable mechanism to stimulate the subjective initiative of community founders, cultivate more community builders, jointly build GrassRoots community ecology, and share the dividends brought by the future.

3.2 Cultivate the people of the aggregated community nodes

A community is composed of several communities, and the founder of each community is the node person of the community, which is crucial to the construction of the whole community ecology. Community node people are the link between users and the community. GrassRoots In the future, the community will cooperate with the community co-builders to cultivate and gather enough community nodes to jointly build the GrassRoots community ecology.

3.3 Cultivate aggregate development partners

In the future, Excellence will develop its own main chain. Based on the main chain and open platform, Excellence will cooperate with global developers and co-builders to develop more application scenarios needed by various communities, and jointly build a sustainable blockchain community ecosystem to encourage every developer to directly exchange real value with innovation.

3.4 Build blockchain Business School to cultivate more users

Users need to be cultivated and guided. In the future, a sufficient user base in the blockchain ecosystem needs to be jointly created by more blockchain organizations and blockchain evangelists. GrassRoots As the main chain of the global GrassRoots community, it will make every effort to build its own blockchain business school based on its own DAPP. Through online and offline learning methods, it will cooperate with community creators and community node people to cultivate more community users.

3.5 Enhance the community user activity through the series of product functions

Community users active from the design of product function, GrassRoots community will develop a series of product functions, serve the community users, enhance community users viscosity, improve community users activity has in the development and future development function: community function, community, live learning, health, entertainment consumption, mobile phone mining, task release, daily tasks, digital wallet, real-time

transactions, information release, yuan universe chain swim the world, mall, member center, activity function, etc.

3.6 Create a powerful community function to aggregate community energy

A lot of people get together to form a community, and many communities get together to form a community. GrassRoots The community should build a powerful community function, so that everyone can have the motivation and methods to build their own community. Let more community nodes have the motivation and ways to become community founders. Connect people and people, community and community, community and community, community and community into an integrated whole.

3.7 Task release and task collection

Blockchain organizations publish the tasks on the GrassRoots community platform, and the community receives and performs the tasks. Blockchain institutions do not have to consider whether the task comes out, but only need to set the content of the task and the corresponding rewards for

completing the task, and only need to quietly develop more landing applications based on their own blockchain ecology. The community no longer have to worry about only "conversation" and "speculation".

At the same time, there will be more and more tasks for the community to perform and get the corresponding revenue.

3.8 Community users select tasks through community voting

With the continuous maturity of blockchain technology, more and more landing applications will appear, and blockchain organizations need community users to complete various tasks. How to identify and choose users when faced with complex tasks? The purpose of GrassRoots community is to realize that the

community autonomous community chooses the best quality and most convincing tasks to complete through the GrassRoots DAO mode voting method, and the GrassRoots community returns the relevant revenue to the users.

3.9 Protect the rights and interests of community users through smart contracts

In the era of Internet explosion, Internet companies, in order to publicize their products and services and in order to seize user groups, will hold various activities and release various tasks for users to complete. However, due to the lack of integrity or problems in intermediate channels, too many users and team leaders have completed the tasks but cannot guarantee the rights and interests. Blockchain technology solves the trust problem. Grass Roots community will guarantee the rights and interests of people in the global community through blockchain technology and smart contracts.

[https:// grbsc.top](https://grbsc.top)

Chapter 4: DAPP Product functions

4.1 Community functions

The carrier of the community is an instant messaging group tool. Everyone can create a community for free, but each ID can only create one community, to avoid the flood of other community platform groups and no quality. Each startup community starts with 500 people, and as the community expands, the community cap can be upgraded by contacting community administrators. Users can create communities, search or join communities, group chat, give out digital currency red envelopes, etc. The group manager of a community can choose to enter a community, or choose to exit a community, but a community can only enter one community at the same time.

4.2 Community function

Blockchain institutions and individuals who meet certain conditions can apply for a community. Each community has an

independent and unique ID, and community and ownership information will be included in the Grass Roots community block. Community managers can release information, community members can release news, through Timeline, community forum, broadcast room for community members to interact. Community managers need to reserve a certain amount of Grass Roots in advance. Set community contribution reward items and parameters, and the contribution of community members is calculated through SP 0 S algorithm (full name: Contribution algorithm, Chinese: contribution algorithm). Use smart contract to reward Grass Roots to encourage community members to contribute to the community, so as to promote the growth of the community and improve community stickiness and activity. When the Grass Roots to use as motivation is insufficient, community managers need to supplement Token.

Community managers can receive the tasks at the task center, lead the community members to complete the tasks, and get the rewards.

4.3 Chain consumption and entertainment

Chain of entertainment consumption application goal is to establish a unified global game entertainment consumption value-added virtual assets, through distributed general ledger block chain application, both assets and non-financial applications, from the selected games and entertainment consumption application scenarios extract file several universal exchange service mode, respectively through the basic book protocol / architecture level and application level technology to realize the global game industry the actual value

of virtual world assets anchor, and reverse in the actual consumption scenario and game entertainment virtual scene hard link, and makes this value has higher value-added properties.

4.4 Auction mall

Auction on the basis of block chain technology, directly use encryption token Grass Roots bidding bidding is also based on block chain technology of digital art auction platform, the goal is to collect all the pieces, complete works of art, get the art of digital copyright (including incidental intellectual property) and prize pool award.

Auction process: All the goods participating in the auction will open after hitting the shelves. In the countdown, you can bid up based on the starting price. If you to the right goods "bid" after the bidding stage, you will successfully for the goods in the auction into the last 5 minutes countdown, if someone "price" countdown will be restored to 5 minutes, until the bidder bid after 5 minutes, the auction, the bidders take goods.

4.5 Pledge of mining

Grass Roots The community will set up a liquidity mining

bonus pool, users can deposit the pledged coins into the decentralized trading platform to provide liquidity for the Grass Roots capital pool, so as to obtain the LP trading token, and then pledge the LP trading token on the official DAPP for liquidity mining.

4.6 NFT blind box

Grass Roots Put it on the gamified curation and publishing mechanics. This is the blind-box mechanism of the Grass Roots. Grass Roots The blind box mechanism not only has artistic creators and collectors, but also tries to give full play to the advantages of planners (curator), so as to form a more sustainable market. On Grass Roots, buyers can open the blind box and find fresh NFT artwork to increase the interest of discovery. Grass Roots The blind box mechanism is governed by the token holders of the platform. This also refers to the current common practice in GAMEFi programs. In other words, Grass Roots is a decentralized market, and over time, it is ultimately decided by its token holders.

The 4.7-yuan universe scene

Grass Roots It will eventually create a virtual space different from reality. Thus, human activities are transplanted from the real space to the virtual space, which is a world that can reflect the real world but is independent of the reality. Grass Roots Collect VR technology, AI technology, cloud computing, and other technologies to create an "immersive", "low delay" and "anywhere" universal world. The establishment of a virtual world cannot be separated from the establishment of a social system, which is composed of the economic relations between social people and them. It is a group formed by the organic connection and mutually beneficial cooperation of human beings, and an organic whole formed according to certain norms of behavior, economic system and social norms. Grass Roots Can let us have a like "oasis" in the movie, help human to the final form of virtual space, and in the virtual world to give human a: decentralized, no closed, no monopoly can guarantee the security of peoples privacy of xanadu, at the same time can let people break the reality of qualified rules, give everyone the chance to dominate their life.

4.8 Chain four function

Grass Roots The community will develop a series of small games to apply to the DAPP. With the birth of each game scene, you can acquire the economic value of Token during the entertainment and leisure. The competition rules in the game highlight the social attributes, and the fresh game scenes make you more eager to try, and promote the ecological prosperity of WEB 3 community.

4.9 Task functions

Task functions are divided into daily tasks and exclusive

tasks. Daily tasks provide constantly rich online tasks, complete the actions such as check-in, reading, like, invitation to gain force value; highlight the active value, the blockchain project party, digital currency exchange, blockchain media, blockchain organizations such as registration, sharing, attention, air drop, voting, by the community creators will lead the community members to complete the task to obtain rewards.

Chapter 5: Grass Roots Advantages

5.1 Profit model

1. Grass Roots can give game developers twice as much

revenue as its competitors.

2. Manage your community with built-in tools, including Club, forums, press releases, chat rooms, just like having your own development platform.

3. The instant sales revenue payment function allows developers to obtain sales funds in the first time, so that they can transfer the funds to the new market budget, completely free from the standard 60-day window.

4. Get more community support through financial incentives for beta beta, bug tracking, feedback, and more.

5. Steam, Xbox, PlayStation games will be easier ported to

Grass Roots by using the universal SDK provided by the Grass Roots platform.

6. Make profits through in-game advertising, second-hand market, commodity trading and recommendation.

7, can obtain a variety of easy to use innovative marketing and promotion tools.

8. Players, traffic owners, bloggers, and media can access relevant content and participate in like-minded communities.

5.2 Application advantages

The genes and advantages of Grass Roots have created a global blockchain social cluster ecosystem. As a highly autonomous and completely open economic ecosystem, any individual and team can interact and communicate in Grass Roots barrier-free, and operate together. The underlying encryption technology of blockchain, through the decentralized digital economy model of Grass Roots public chain, then forms a new business form of blockchain, which will lead the application of the whole game world. It is the public chain in the game ecological development system, standing at the highest point of the whole industry.

5.4 Gameplay advantage

Grass Roots With exclusive ecological product ownership, you can create your own community, through powerful management functions, but also free to create application layer, in the Grass Roots community mall, universe application, chain travel has their own value products and a series of ownership; from a global perspective, to create a global consensus community.

5.4 Consensus mechanism

Grass Roots Rapid ecological development, multi-community operation high autonomy, build community Republic, community Republic, community business school, referendum and co-elected community high autonomy model, quickly detonate the driving force of peoples hearts, to achieve Grass Roots strong consensus culture.

Chapter 6: Circulation and Development Vision

6.1 Project Introduction

Project name: Grass roots

Token symbol: GR

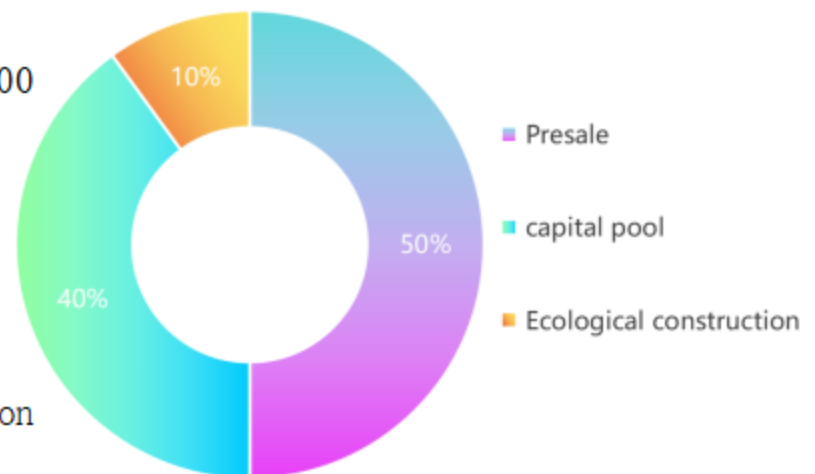

Circulation: 60.000.000.000

Token allocation:

50% Pre-sale

40% Capital pool

10% ecological construction

6.2 Project Planning:

Q1 Technology optimization and ecological construction

Goal: To strengthen the technical foundation of GR cryptocurrencies and build a complete ecosystem. Continuous optimization of encryption algorithm to improve transaction speed and security. Develop more practical features, such as decentralized applications (DApps) and smart contract support. Build partnerships to expand the application scenarios and distribution channels of GR cryptocurrencies.

Q 2 market development and brand building

Objective: To expand the market influence of GR cryptocurrency and enhance the brand value. Increase marketing efforts to attract more investors and users through online and offline activities. Establish a professional marketing team and develop accurate marketing strategy. Strengthen the cooperation with the media and opinion leaders to enhance the brand awareness and reputation.

Q3 Compliance and Sustainability

Goal: To ensure the healthy and sustainable development of GR cryptocurrencies within the compliance framework. Pay close attention to the regulatory policy trends in various countries to ensure that GR cryptocurrencies meet relevant regulatory requirements. Strengthen internal compliance management and establish a sound risk prevention and control mechanism. Promote the development and implementation of industry standards, and promote the healthy development of the cryptocurrency industry.

Chapter 7 Risk warning

(1) The risks related to judicial supervision

Blockchain technology has become the main object of regulation in various major countries in the world. If the regulatory subjects intervene or exert influence, the application or tokens may be affected by it. For example, if laws restrict the use and sale of electronic tokens, the tokens may be restricted, hindered or even terminated by the development of the application.

(2) The risk of the applicationlack of attention

There is a possibility that platform applications are not

used by a large number of individuals or organizations, which means that the public does not have enough interest to develop and develop these related distributed applications, and such a lack of interest may have a negative impact on tokens and applications.

(3) The risk of competitive capacity expansion

There is some competition between blockchain tokens, and if there is a stronger competitor in the industry, it is bound to be affected.

(4) The risk that the relevant application or products do not meet the expected standards

In the development stage, the platform itself may make major changes before the release of the official version, or the market will undergo huge changes before the release, resulting in the platform failing to meet the expected requirements in terms of function or technology. Or because of the wrong analysis, the platforms application or token fails to function as expected.

(5) The risk of cracking

The technology currently used cannot be cracked, but assuming the rapid development of cryptography, or the rapid speed of computer computing, such as the development of quantum

computers, may bring the risk of cracking, leading to the loss of tokens.

(6) Other instructions

Please fully understand the development plan of the operating platform and the related risks of the blockchain industry, otherwise it is not recommended to participate in this investment. If you make the investment, you confirm that you have fully understood and recognized the description of the terms in the rules.

Chapter VIII Disclaimer

This document is only for the purpose of conveying the information and does not constitute relevant opinions on the sale of this project. The above information or analysis does not constitute the reference basis for the investment decision-making right. This document does not constitute any investment advice, investment intention, or instigated investment.

This document is not formed or understood as providing any sale, nor is it any contract or commitment.

relevant intended users should clearly understand the risks of the project. Once the investors participate in the investment, they will understand and accept the risks of the project, and are willing to bear all the corresponding results or consequences personally.

The operation team shall not bear any direct or indirect losses involved in the project and caused by the Project.
